

PeopleSoft Training: Student Records Release 9.0

Course (4 Days)

In this four-day class, participants learn how to create the course catalog including enrollment requirements (pre-requisites), repeat rules, and final exam schedules. Once courses are created, participant will learn how to schedule classes. For those classes that don't fall into a traditional scheduling model, participants will create dynamic date rules and schedule a dynamically dated class. They will also create a course that requires department or instructor permission and see how that permission can be granted. To control enrollment, participants will create enrollment appointments for students. They will add individuals to the database, make them students, and enroll them in classes. Participants will also learn how to resolve errors based on the rules created. Finally, they will learn how to rollover schedule of classes from one term to another.
